

The Problem

- Over 1 billion people globally do not have access to proper eye-care (due to: logistics, affordability, availability of specialists)
- Eye specialists occupied with basic tasks instead of dealing with demanding cases
- 330k optometrists in the world whereas 14M are needed to provide effective eye care (WHO's recommendation is 1:600 optometrist-to-patient ratio)
- Global coverage gap for unaddressed vision impairment = USD 25 billion

The Solution

eyeTEST™ is our original mobile app enabling patients to self-examine their eyes' refractive error at home using just their smartphone. The distinguishing factor is implementation of objective* testing methods.

eyeTEST™

Three easy steps to have your eyes tested for refractive error

1

Fill in a basic questionnaire in the app

2

Perform 3 simple tests by taking photos of your eyes - guided by AI

3

Get the results of your refractive error
