

HORAS OEE

OVERALL EQUIPMENT EFFECTIVENESS MONITORING SYSTEM FOR YOUR BUSINESS

MEASURE AND IMPROVE

Collect production equipment data in real time;
Quickly respond to changes in productivity;
Eliminate unplanned downtime;

Visualize your production processes;
Measure and control production in real time;
Increase production transparency;

Involve production teams into more efficient operations;
Improve decision making.

MEASURE:

- › Value-creating time
- › Equipment adjustment time
- › Downtime
- › Equipment failure statistics
- › Equipment effectiveness

WHAT OUR CLIENTS SAY:

“With the help of HorasOEE, our OEE grew by more than 10%. The first 5% was easy to achieve, with our workers able to monitor their own indicators and understand their contribution to the ultimate result. The remaining 5% came from analysing downtime and taking preventive action to stop it from happening. The reports opened our eyes and we no longer have any reason to say that better results cannot be achieved. In addition, the production OEE highlighted relevant differences between our factories, so we will now replace equipment in the less effective ones. We now know with certainty how soon the investment will pay off due to increased productivity.”

Mantas M.
Production Director
Building Materials

“The ability to monitor the production process in real time makes the job easier for our planning and technical crews. The statistics on failure-time and amounts allows us to rectify problems faster and plan their prevention. By analysing OEE indicators, we are able to develop optimal production plans. With the ability to change a number of settings on the user side, we can adapt the program to our needs more quickly and accurately.”

Egidijus M.
Energy Engineer
Food and Drink
