

AI supported platform for personalize and coordinate healthcare

chronisync.com

Primary Care pains and irritations

Staff's overwork

**Low efficiency of patient
care**

Staff shortage

Primary Care pains and irritations

Planning medical visits (*Finding time slot, calling to medical facility etc.*)

Participating in medical visit (*Access to the medical facility, queues, unpredictable time of visit etc.*)

Loss of motivation for treatment

Once patients are diagnosed with chronic disease (e.g. diabetes), they must make medical appointments for check-ups almost **for the rest of their lives!**

Imagine a world where

chronic diseases are controlled in a much better way than they use to be.

For Clinics

We create an AI supported platform for chronic disease personalized management. We expand the capabilities of medical facilities by giving them coordination service and access to specialists and enabling them to offer the services of their specialists to other facilities. We create a complex coordination service which will optimize time and schedules.

For Patients

We create solutions that make life easier for people with chronic diseases. We take over the burden of planning and arranging visits, and even participating in them. We create an assistant who will handle Your disease.

Thank *you!*
